

The Griff Bin®

The Griff Bin® is a high quality container in 30 and 60 litre sizes made from high molecular polyethylene and ideal for all your bio-hazardous material.

The Griff Bin® is perhaps the best known of all the Griff® range, renowned for its sturdiness, excellent closure mechanism and easy carrying handle. A ridge around the top allows for ease of handling and stacking.

The height of the 60 litre Griff Bin® makes it ideal for use in operating theatres.

Also available is the Griff Ped® the perfect partner to the Griff Bin®. The rim is split and hinged to allow the safe removal of the Griff Bin® without lifting. In addition, it has a rise and fall metal lid which is operated by a foot pedal. Supplied on two castors means that the Griff Bin® can be safely transported.

TECHNICAL DETAILS

Code	Volume	Weight	Height	Outer Diameter
Griff Bin® 30Y	30 litres Max. 13.5kg	750g	340mm	345mm
