SHARPS CONTAINERS

Our range of sharps containers are designed to ensure we can offer an appropriately sized container for clinical areas in both primary and secondary care.

Designed with the utmost safety at heart, and with an easy to use temporary and permanent closure function, our containers allow you to safely dispose of all medical sharps. Each container includes a clearly marked area with sections to detail when it was started and permanently closed.

We also offer training and education on the correct usage and assembly of our containers, as well as useful information for general waste management and needle stick injuries.

For further details please contact your local G+N Representative or visit our website.

UN 3291 approved

CLINICAL WASTE – RIGID CONTAINERS

Our range of rigid polypropylene clinical waste containers are available in 3 different sizes and 5 core colours to ensure that all of your clinical waste is correctly segregated and in adherence with hospital policy.

Our clinical waste containers conform with UN3291 and BS7320 standards needed in the UK, and they are all designed to give flexibility and suitability for each clinical area that is using a container.

For further details please contact your local G+N Representative or visit our website.

CLINICAL WASTE – ENVIRONMENTALLY FRIENDLY CONTAINERS

To complement our clinical waste rigid containers, we are able to provide a cardboard and corrugated plastic clinical waste container for hospitals and areas that have the ability to use alternative waste disposal methods. With the need to lower the carbon footprint of the NHS, looking at alternative methods of disposal is key. Not only are we able to lower the carbon footprint, but it will also save money and space for the hospital due to the flatpack nature of both products.

Our environmentally friendly method of clinical waste disposal adheres to UN3291 standards.

For further details please contact your local G+N Representative or visit our website.

50 Litres

Length: 290mm
Width: 280mm
Height: 600mm
Capacity: 50 Litre

Our GriffPAC is made from lightweight corrugated polypropylene and approved to UN3291. GriffPAC is ideal for the collection and disposal of clinical waste.

It is resistant to liquid contamination such as wet floors, liquid accidentally placed inside the box or rain from outside storage.

For further details please contact your local G+N Representative or visit our website.

The Griff PAC® containers are lightweight, robust and 74% lighter than a standard rigid unit

SHARPS

CLINICAL WASTE – RIGID

CLINICAL WASTE – ECO

KEY FEATURES

- Manufactured in lightweight corrugated polypropylene with integral HDPE liner
- Can be stacked efficiently to reduce storage space
- The flat-pack design reduces transport and treatment costs
- Integrated handles allow easy transportation
- The thermos-welded base is resistant to liquid contamination

Colours available:

Our Griff Carton is manufactured from 75% recycled cardboard and designed to be used within a hospital environment in place of a rigid plastic container where appropriate. It uses a double bag system with a plastic inner bag that is tied off and a cardboard box outer to create the second protective layer. Due to infection control we would not recommend using these in a Theatre or Intensive Care Unit.

For further details please contact your local G+N Representative or visit our website.
